EXPERIENCE

AI Security Engineer | CoreDirective

Atlanta, GA | Sep 2025 - Present

- Architected Squire, an AI SOC analyst that drafts a triage verdict for every alert and cuts manual triage time per alert **80%**. Built on LangGraph with human approval gates, pgvector RAG, NeMo Guardrails PII redaction, and Langfuse tracing.
- Threat modeled the OpenClaw gateway (Claude Fable 5) against the OWASP LLM Top 10 and MITRE ATLAS, then set the **guardrail and access requirements the platform shipped with**.
- Ran structured red team assessments on production AI stacks and web applications: prompt injection, jailbreaks, data leakage, excessive agency, and OWASP web risks. Remediated all **6 high and medium findings** in **5 attack classes** before launch.
- Embedded Semgrep SAST, Trivy container image and dependency scanning, Gitleaks secrets scanning, and OPA policy gates for infrastructure as code into CI/CD. Added OWASP ZAP DAST against staging and Cosign image signing, with deploys rejecting unsigned images.
- Placed every admin surface behind Cloudflare Zero Trust, defined in Terraform with **zero public ports** and separate policies for human and service accounts.
- Tuned Falco eBPF container runtime detection shipped to Datadog and mapped to MITRE ATT&CK, cutting daily alerts from **200+ to 12** without losing coverage.
- Authored 57 GRC documents mapping **133 NIST 800-53 controls** plus NIST AI RMF, SOC 2, and ISO 27001, and built a Promptfoo eval harness that regression tests the AI guardrail controls.

IT Security & Operations Manager | Texaco

Atlanta, GA | Mar 2022 - Mar 2026

- Led incident response for 3 retail locations: POS skimmer attempts, credential compromise, unauthorized vendor access. Wrote a 6 step IR runbook that cut containment from **8 hours to 90 minutes**.
- Deployed Splunk as the SIEM with log ingestion from **45+** endpoints and network devices across 3 sites, then built correlation rules and response automations on top. Detection time fell from **48 hours to under 4**.
- Segmented a flat network into isolated VLANs for POS, back office, guest WiFi, and management traffic, then proved the separation with Nmap scans.
- Hardened Active Directory with GPO baselines, stale account cleanup, removal of standing admin rights, and automated credential rotation. Closed **12 of 14** critical audit findings.
- Uncovered **\$18K** a year in card fraud losses tied to payment terminals that failed PCI compliance; closed the exposure across **45+** endpoints with a quarterly vulnerability management cycle of internal Nessus scans, risk ranked fixes, and a current SAQ.
- Automated patch deployment, user provisioning, and compliance reporting with Python, PowerShell, and REST APIs, freeing **12 hours a week** of manual ops work.

TECHNICAL SKILLS

AI Security: LLM guardrail design, AI threat modeling, agentic architecture review, OWASP LLM Top 10

Cloud Security & Automation: AWS, Oracle Cloud, Docker, HashiCorp Vault, OPA policy gates, n8n, Ollama

Identity & Access Management (IAM): Teleport JIT PAM, Keycloak SSO, RBAC, MFA enforcement, least privilege design, mTLS

Frameworks: NIST AI RMF, NIST 800-53, ISO 42001, SOC 2, ISO 27001, PCI DSS

EDUCATION

Georgia State University, Andrew Young School of Policy Studies

B.A. in Economics

A.S. in Business Administration | Dean's List
